

A breakthrough in patient recruitment: save time & costs, find more eligible patients FASTER & attract more trials

CLIX ENRICH for Clinical Trials

"This is a very rare disease, but despite that, in a fraction of the time, CLIX ENRICH found many more eligible patients than we did [via manual process]."

Girish N. Nadkarni, MD, Clinical Instructor of Medicine/Nephrology at Mount Sinai

10x the Pre-screen Patient Yield within 1/4 of the Time

Meet your patient enrollment targets ahead of time and within budget by unlocking the full potential of your Electronic Medical Records.

With Clinithink's breakthrough clinical trials platform you can interrogate your narrative free text data with the click of a button, efficiently finding the highest quality candidates for your clinical trials.

Case studies have shown CLIX ENRICH to be capable of processing over half a million documents relating to more than 8,000 patients in just 15 hours. This typically yields more than 10 times the number of eligible candidates than manual processing, reducing the required effort per patient enrolled by 85%.

Tap into the Wealth of Information in your Narrative Data

CLIX ENRICH automates the process of reviewing the unstructured data in Electronic Medical Records (EMRs).

The most valuable information about your patients is locked in unstructured free text narrative. The only way, until now, to review these notes – which comprise up to 2/3 of the information stored on a patient – has been to read it manually, one record or document at a time. However, this is an incredibly time-consuming, expensive and error-prone process.

With CLIX ENRICH you are now able to unlock the rich information that has been hidden in your narrative data. CLIX ENRICH lets you simultaneously pre-screen thousands of patients against your trial's eligibility criteria in a matter of hours, thus producing an ENRICHed List of highly eligible patients.

Benefits

- Unearth critical patient data buried in EMRs
- Identify and rank the most eligible patients
- Faster, more cost effective and more precise chart reviews
- Use structured and scientific methodology
- Eliminate bias and add scientific rigor
- Applicable across a wide range of therapy areas
- Suitable for use in all types of research site

Get Ahead of the Game and Reap the Rewards

80% of Principal Investigators fail to meet their patient enrollment deadlines, and up to half of the research sites involved in clinical trials struggle to recruit more than one candidate.

With CLIX ENRICH, you can reduce the risk of these expensive delays and meet your recruitment goal faster – helping you to conduct and attract more trials.

CLIX Queries can be authored and run against large volumes of data to match inclusion and exclusion criteria. An ENRICHed List of candidates is then produced in ranked order, enabling you to prioritize patients with the most potential.

This not only speeds up the recruitment process, it is also likely to enhance the quality of your study participants, giving you a massive advantage over the competition.
